HANH K., ERNST P., LO K., KIM G.S., TURCK C., SMALE S.T.;

"The lymphoid transcription factor LyF-1 is encoded by specific, alternatively spliced mrnAs derived from the Ikaros gene.";

MOL. CELL. BIOL. 14.7111-7123(1994).

-!- FUNCTION: BIDDS AND AT123(1994).

-!- FUNCTION: BIDDS AND AT123(1994).

-!- FUNCTION: BIDDS AND AT124 THE ENHANCER (DELTA-A ELEMENT) OF THE CD3-DELTA-GENE. FUNCTIONS IN THE SPECIFICATION AND THE MATURATION OF THE LYMPHOCYTE. ALSO INTERACTS WITH A CRITICAL CONTROL ELEMENT IN THE TOT (TERMINAL DEOXYNUCLEOTIDYLTRANSFERASE) PROMOTER AS WELL AS WITH THE PROMOTERS FOR OTHER GENES EXPRESSED DURING EARLY STAGES OF B AND I CELL DEVELOPMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- TISSUE SPECIFICITY: STRONGLY EXPRESSED IN T-CELLS AND THEIR PROGENITORS, AND ALSO IN B-CELLS.
-!- SIMILARITY: BELONGS TO THE IRAROS FAMILY OF ZINC-FINGER PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           KPFKCHLCNYACQRRDALTGHLRTHSVEKPYKCEFCGRSYKQRSSLEEHKERCRTFLQST 166
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            47 RPTSGKMNCDVCGLSCISFNVLMVHKRSHTGERPFQCNQCGASFTQKGNLLRHIKLHTGE 106

-!- FUNCTION: BINDS AND ACTIVATES THE ENHANCER (DELTA-A ELEMENT) OF
THE CD3-DELTA GENE. FUNCTIONS IN THE SPECIFICATION AND THE
MATURATION OF THE T LYMPHOCYTE. ALSO INTERACTS WITH A CRITICAL
CONTROL ELEMENT IN THE TDT (TERMINAL DEDXYNUCLEOTIDYLTRANSFERASE)
PROMOTER AS WELL AS WITH THE PROMOTERS FOR OTHER GENES
EXPRESSED DURING EARLY STAGES OF B AND T CELL DEVELOPMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBCELLULAR LOCATION: NUCLEAR.

The Ikaros gene encodes a family of lymphocyte-restricted zinc
finger DNA binding proteins, highly conserved in human and mouse.";
J. IMMUNOL. 156:385-592(1996).
C. I- FUNCTION: BINDS AND ACTIVATES THE ENHANCER (DELTA-A ELEMENT) OF
THE CD3-DELTA GENE. FUNCTIONS IN THE SPECIFICATION AND THE
MATURATION OF THE TLYMPHOCYTE. ALSO INTERACTS WITH A CRITICAL
CONTROL ELEMENT IN THE TDT (TERMINAL DEOXYUGLEOTIDYLTRANSFERASE)
PROMOTER AS WELL AS WITH THE PROMOTERS FOR OTHER GENES EXPRESSED OF B AND T CELL DEVELOPMENT.
C. IS SUBCELLULAR LOCATION: NUCLEAR.
C. ITSSUE SPECIFICITY: ABUNDANTLY EXPRESSED IN THYMUS, SPLEEN AND
PERIPHERAL BLOOD LEUKOCYTES AND LYMPH NODES. LOWER EXPRESSION IN
BONE MARROW AND SMALL INTESTING.
C. INTERNATIVE PRODUCTS: SIX FORMS OF THE PROTEIN; ISOFORMS IXI-IKE;
MARROW AND SMALL INTESTING. THE SEQUENCE SHOWN HERE IS

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 7; Page 75-77; 158Pp; English.

This is the amino acid sequence of murine Ikaros protein isoform mix-1, deduced from a cDNA clone (see v42808) obtained from a contained from a contained from a contained from a contained from a cutivating the CD3-delta gene enhancer (see v42804). Proteins a ctivating the CD3-delta gene enhancer (see v42804). Proteins of the murine Ikaros family (see also W70963 and W70965-68) are isoforms that arise from differential splicing of Ikaros gene transcripts, and contain different combinations of zinc fingers. They are expressed primarily in T cells in the adult and may play a crole as a genetic switch regulating entry into the T cell lineage. The murine and human sequences (see W70964, W70969 and W70971) are very similar. The invention provides Ikaros nucleic acids, vectors and host cells expressing Ikaros polypeptides. These can be used to treat T and B cell diseases (e.g. immune deficiencies caused by curys, radiation or cancer), to control expression of heterologous contains contains and provides contains the contains 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treat nervous system diseases (e.g. Alzhelmer's disease) and to modulate cell division, amplification or differentiation, especially in haematopoietic cells. Some Ikaros isoforms are antagonistic of others and may be used to inhibit interaction with DNA sequences. Sequence 518 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid encoding Ikaros protein involved in early differentiation of lymphocytes - existing in several isoforms, and related products, used to treat e.g. immune diseases or cancer and to control cell differentiation

Disclosure: Fig 4: 102pp; English.

The sequence of 57.5 Kpa mouse Ikaros protein mIK-1 (R92017) was deduced from mouse Ikaros cDNA (T16662) isolated from a mature T-cell line E15 library. Ikaros protein is a master regulator of hematopoletic differentiation and a major determinant in lymphocyte differentiation and a major determinant in lymphocyte differentiation of major determinant in lymphocyte differentiation and a major determinant in lymphocyte differentiation and a major determinant in lymphocyte from differential splicing of Ikaros gene transcripts. Transgenic animals, esp. mice, having a mutated Ikaros transgene, esp. a mutation that alters the DNA binding domain of the Ikaros protein, are used as models to determine the effects of

The present invention describes a purified peptide having at least one of the following properties: (a) it stimulates transcription of a DNA sequence under the control of a delta A element, an NFKB element on an KRA sequence; (b) it binds to any of a delta A element, an NFKB element or an itaros binding oligonucleotide consensus sequence; (c) it competitively inhibits the binding of a cautrally occurring itaros isoform to any of a delta A element. an NFKB element or an itaros binding oligonucleotide consensus sequence; (d) it competitively inhibits itaros binding to itaros responsive elements, or (e). it inhibits protein protein interactions of transcriptional complexes formed with naturally occurring itaros isoforms. The proteins, provided that they stimulate gene transcription under the control of delta A elements, NFKB elements and/or itaros-binding oligonucleotides, bind to delta A elements, NFKB elements and/or itaros-binding oligonucleotides, competitively inhibit binding of naturally occurring itaros isoforms to delta A elements, NFKB elements and/or itaros-binding oligonucleotides, competitively inhibit itaros and/or itaros-binding oligonucleotides, competitively inhibit itaros binding to itaros-binding oligonucleotides, competitively inhibit itaros binding to itaros-responsive elements and/or itarios competition it protein protein interactions of transcriptional complexes and/or itarios competition in the control of control of competition in the control of competition in the control of control of control of competition in control of control o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    naturally occurring Ikaros isoforms, can be used to treat immune system disorders, e.g. leukaemia or AIDS, or corpus striatum disorders, e.g. Alzheimer's disease. The present sequence represents a specifically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       111 RLPNGKLKCDICGIVCIGPNVLMYHKRSHTGERPFQCNQSGASFTQKGNLLRHIKLHSGE 170

This is an example of a potential Ikaros sequence derived from a degenerate library of polypeptides based on the amino acid sequences of human and murine Ikaros isoform I proteins hik-1 (see W70964) and mik-1 (see W70966). A combinatorial library is produced using a degenerate library of genes which each include at least a portion of potential likaros sequences. It can be generated by combinatorial intares sequences. It can be generated by combinatorial integenesis at the nucleic acid level.

Native Ikaros is active in the early stages of lymphocyte of ifferentiation. Different isoforms arise from differential splicing of Ikaros gene transcripts. They are expressed primarily in T cells in the adult and may play a role as a genetic switch in T cells in the adult and may play a role as a genetic switch in T cells in the adult and may play a role as a genetic switch in T cells in the adult and may play a role as a genetic switch in T cells in the adult and may play a role as a genetic switch.

Transcripts of Karos and host cells. These can be used to treat I and B cell diseases (e.g. immune deficiencies caused by drugs, and B cell diseases (e.g. immune deficiencies caused by drugs, and be cancer), to control expression of heterologous genes 107 KPFKCHLCNYACQRRDALTGHLRTHSVEKPYKCEFCGRSYKQRSSLEEHKERCRTFLQST 166 47 RPTSGKMNCDVCGLSCISFNVLMVHKRSHTGERPFQCNQCGASFTQKGNLLRHIKLHTGE 106 Gaps WPI; 98-378292/33.

New nucleic acid encoding Ikaros protein involved in early
New nucleic acid encoding Ikaros protein involved in early
differentiation of lymphocytes - existing in several isoforms, and
related products, used to treat e.g. immune diseases or cancer and
to control cell differentiation radiation or cancer), to control expression of heterologous genes placed under control of an Ikaros-responsive element, to treat nervous system diseases (e.g. Alzheimer's disease) and to modulate cell division, amplification or differentiation, especially in haematopoietic cells. Some Ikaros isoforms are antagonistic of others and may be used to inhibit interaction with DNA sequences. PS Tayan 1: Column 127-130; Illpp; English.

Cainn 127-130; Illpp; English.

The present invention describes a purified peptide having at least one
CC of the following properties: (a) it stimulates transcription of a DNA
Sequence under the control of a delta A element, an NFKB element or an Ikaros binding oligonucleotide consensus sequence; (b) it binds to any of
C a delta A element, an NFKB element or an Ikaros binding oligonucleotide
CC consensus sequence; (c) it competitively inhibits the binding of a
CC adurally occurring ikaros isoform to any of a delta A element, an NFKB
C competitively inhibits Ikaros binding to Ikaros responsive element; or
CC formed with naturally occurring ikaros isoforms. The proteins, provided
C that they stimulate gene transcription under the control of delta A
CC delta A elements and/or Ikaros-binding oligonucleotides,
CC delta A elements, NFKB elements and/or Ikaros-binding oligonucleotides,
CC delta A elements, NFKB elements and/or Ikaros-binding oligonucleotides,
CC competitively inhibit binding of naturally occurring Ikaros isoforms of
CC inhibit protein-protein interactions of transcriptional complexes with
CC delta A elements, NFKB elements and/or Ikaros-binding oligonucleotides,
CC inhibit protein-protein interactions of transcriptional complexes with
CC delta A elements, NFKB elements and/or Ikaros-binding oligonucleotides,
CC inhibit protein-protein interactions of transcriptional complexes with
CC disorders, e.q. leukaemia or ALDS, or corpus striatum disorders, e.g.
CA isorders, e.q. leukaemia or ALDS, or corpus striatum disorders, e.g.

T-cell pathway regulatory gene, Ikaros - encodes family of unique zinc finger proteins, useful for treating immune system disorders Claim 14: Figure 4: 112pp: English.

The Ikaros gene encodes a zinc finger protein which can be used in a therapeutic composition to treat animals with an immune system disorder. It may also be used for assessing whether a subject is at disorder. It may also be used for assessing whether a subject is at

Transgenic rodent having Ikaros trans-gene (pref. mutated) - is

Transgenic rodent having Ikaros trans-gene (pref. mutated) - is

Transgenic rodent having Ikaros trans-gene das model to determine

effects of treatment for immune and nervous system disorders

Disclosure; Page 75-76; 102pp; English.

The sequence of an Ikaros protein (R92021) is provided in the

specification. Ikaros protein (R92021) is provided in the

specification. Ikaros protein and amajor determinant in lymphocyte

chematopoietic differentiation and a major determinant in lymphocyte

differentiation. Isoforms of Ikaros gene transcripts. Transgenic animals,

cref. mice, having a mutated Ikaros protein, are used as

models to determine the effects of treatments for immune or nervous

Mew nucleic acid encoding Ikaros protein involved in early differentiation of lymphocytes - existing in several isoforms, and differentiation of lymphocytes - existing in several isoforms, and teated products, used to treat e.g. immune diseases or cancer and to control cell differentiation.

This is the amino acid sequence of human Ikaros protein isoform Ika', deduced from a cDNA clone (see V42840) obtained from a Jurkat T cell line CDNA library. Native Ikaros is active in the acity stages of lymphocyte differentiation, binding to and activating the CD3-delta gene enhancer (see V4280). Proteins of the human Ikaros family (see also W70864 and W70869) are civating the CD3-delta gene enhancer (see V42804). Proteins of the human Ikaros family (see also W70864 and W70869) are isoforms that arise from differential splicing of Ikaros gene isoforms that arise from differential splicing of Ikaros gene isoforms that arise from differential splicing of Ikaros gene isoforms that arise from differential splicing of Ikaros gene isoforms that arise from differential splicing of the human and murine sequences (see also W70865 and W70865-68) are very similar. The invention provides Ikaros mucleic acids, wectors and host cells expressing Ikaros polypeptides. These can be used to treat rervous system diseases (e.g. immune deficiencies caused by the treat nervous system diseases (e.g. Alzheimer's disease) and to modulate cell division, amplification or differentiation, especially in haematopoietic cells. Some Ikaros isoforms are antagonistic of others and may be used to inhibit interaction with DNA sequences.
Human Ikaros isoform hik'i.
Ikaros, hIK'1; transcription factor; human; lymphocyte;
cell differentiation: T cell; cancer; immunodeficiency;
Alzheimer's disease; therapy; diagnosis.

New nucleic acid encoding Ikaros protein involved in early differentiation of lymphocytes - existing in several isoforms, and additional acid encoding Ikaros protein involved in early adifferentiation of lymphocytes - existing in several isoforms, and related products, used to treat e.g. immune diseases or cancer and to control cell differentiation

This is the amino acid sequence of human Ikaros protein isoform of this is the amino acid sequence of human Ikaros protein isoform hir-1, deduced from a CDNA library. Native Ikaros is active in the early stages of lymphocyte differentiation, binding to and activating the CD3-delta gene enhancer (see V42804). Proteins contivating the CD3-delta gene enhancer (see V42804). Proteins contivating the acid ferential splicing of Ikaros gene isoforms that arise from differential splicing of Ikaros gene transcribts, and contain different combinations of zinc fingers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         107 KPFKCHLCNYACQRRDALTGHLRTHSVEKPYKCEFCGRSYKQRSSLEEHKERCRTFLQST 166

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             They are expressed primarilly in Teells in the adult and may play a role as a genetic switch regulating entry into the T cell lineage. The human and murine sequences (see also W70963 and W70965-68) are very similar. The invention provides Ikaros nucleic acids, vectors and host cells expressing Ikaros polypeptides. These can be used to treat T and B cell diseases (e.g. immune deficiencies caused by drugs, radiation or cancer), to control expression of heterologous genes placed under control of an Ikaros responsive element, to treat mervous system diseases (e.g. Alzheiner s' disease) and to modulate cell division, amplification or differentiation, especially in haematopoletic cells. Some Ikaros isoforms are antagonistic of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Wouse Abiolos (W15574) is a homologue of Ikaros whose expression is bisclosure; Page 76-78; 115pp; English.

Chouse Abiolos (W15574) is a homologue of Ikaros whose expression is restricted to lymphoid lineage. Its amino acid sequence was deduced from a cDNA clone (T60490) obtd. from a mouse spleen cDNA library. A human Aiolos partial polypeptide has also been identified (see also W15575). Aiolos forms homodimers that are content transcriptional activators. It also forms less potent content contents with Ikaros. Recombinant Aiolos can be produced in transformed host cells. Aiolos misexpressing immune system of components can be used to reconstitute the immune system of a mammal. The Aiolos protein, coding sequence or cells expressing contents.

Cherapy. Such disorders include T-cell leukaemias and lymphomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Transgenic rodent having Ikaros trans-gene (pref. mutated) - is severely immuno-compromised and can be used as model to determine of fetests of treatment for immune and nervous system disorders bisclosure; Fig 2: 102pp; English.

In almost fall-length cDNA sequence (T16060) codes for Part (R92015) of the human Ikaros protein, a zinc finger protein that is a master regulator of haematopoietic differentiation and a major determinant in lymphocyte specification and development. Different isolated Transgenic animals, pref. mice, having a mutated Ikaros transgene, esp. a mutation that alters the DNA binding domain of the Ikaros protein, are used as models to determine the effects of treatments for immune or nervous system disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               130 RLPNGKLKCDICGIICIGPNVLMVHRRSHTGERPFQCNQCGASFTQKGNLLRHIKLHSGE 189

T-cell pathway regulatory gene, Ikaros - encodes family of unique zinc finger proteins, useful for treating immune system disorders Claim 14; Page 44-46; 112pp; English.

The ikaros gene encodes a zinc finger protein which can be used in a therapeutic composition to treat animals with an immune system disorder. It may also be used for assessing whether a subject is at risk for an immune disorder. It is of particular use in treating a disorder of the corpus striatum.

ö

07-JUL-1997 (first entry)
Mouse Aiolos polypeptide.
Aiolos, transcription activator; immune system; T lymphocyte;
B lymphocyte; leukaemia; lymphoma; asthma; gene therapy;
transgenic animal.
